

EN36 Black Steel Bars (16mm–150mm) | Rolled & Annealed for Case Hardening Applications

Descrição

EN36 is a **low-carbon nickel-chromium steel** known for its excellent **case hardenability and core toughness**. When carburized and heat treated, it develops a **high surface hardness** with a **ductile and tough core**, making it ideal for heavily loaded, wear-resistant components.

At **Steelmet Industries**, we supply **EN36 black bars in diameters from 16mm to 150mm**, available in **hot rolled or annealed condition**, tailored to your **case hardening process requirements**.

Key Properties of EN36 Black Bars

- **Standard:** BS970:1955
- **Grade:** EN36
- **Carbon Content:** ~0.12–0.18%
- **Nickel Content:** ~3.00–3.75%
- **Chromium Content:** ~0.8–1.1%
- **Delivery Conditions:** Rolled / Annealed
-

Form: Round Bars, Black Bars

- **Size Range:** 16mm to 150mm
- **Machinability:** Good in annealed condition
- **Case Hardening:** Excellent (carburizing depth up to 2.5mm)
- **Applications:** Gears, shafts, aerospace pins, camshafts, heavy-duty rollers

Applications of EN36

EN36 black steel bars are widely used in:

- **Transmission components** (gears, shafts, hubs)
- **Camshafts and crankshafts**
- **Pins and rollers in heavy machines**
- **Defense and aerospace-grade parts**
- **Automotive wear-resistant components**

Its popularity in demanding mechanical applications stems from its **durability, excellent wear resistance, and impact strength** after carburizing.

Related Grades and Variants

Steelmet Industries also offers **EN36 variants and equivalent grades**, each with slightly adjusted chemistries to suit particular applications:

Grade	C (%)	Cr (%)	Ni (%)	Mo (%)	Use Notes
EN36	0.12–0.18	0.8–1.1	3.0–3.75	–	Standard case hardening steel
EN36A	0.14–0.19	0.9–1.1	3.25	–	Improved case depth and hardness

Grade	C (%)	Cr (%)	Ni (%)	Mo (%)	Use Notes
EN36B	0.14–0.19	0.9–1.1	3.5	–	Aerospace-grade case hardening
EN36C	0.16–0.20	1.0–1.2	3.5–3.75	–	Enhanced wear and heat resistance
EN26	0.35–0.45	1.2–1.5	1.3–1.8	0.2–0.4	Higher core strength alternative

Variants like EN36A/B/C and EN26 are supplied subject to availability and customer specifications. Contact us for exact specifications and documentation.

International Equivalent Grades

Standard	Grade / Equivalent
----------	--------------------

BS970:1991	655M17
------------	--------

AISI / SAE	8620 (close)
------------	--------------

DIN	17NiCrMo6 / 1.6587
-----	--------------------

ISO	17CrNiMo6
-----	-----------

JIS	SNCM220
-----	---------

IS	17CrNiMo6
----	-----------

GOST	18???? (18KhGNM)
------	------------------

GB (China)	20CrNiMo
------------	----------

Disclaimer: Grade equivalents are based on chemical composition and are subject to application-specific requirements. Please verify with actual mechanical and metallurgical properties before final use.

Why Choose Steelmet Industries?

At Steelmet Industries, we serve both **domestic and global markets** with:

- **? Wide size range** – From 16mm up to 150mm
- **?? Custom lengths** and size tolerances on request
- **? Full documentation support** – MTCs, third-party inspection, lorry receipts, test reports
- **? Prompt and scheduled deliveries**
-

? Material traceability and accountability

- ?? **Also available in other forms:** EN36 rounds in bright or forged forms on request

Frequently Asked Questions – EN36 Bars

Q1. What are EN36 black bars used for?

Answer: EN36 black bars are widely used for components like gears, camshafts, and shafts that need a hard, wear-resistant surface and a tough core after carburizing.

Q2. How is EN36 different from EN36B or EN26?

Answer: EN36B has tighter control and better case hardening response, often used in aerospace. EN26 has higher carbon and molybdenum, offering better core strength.

Q3. Can Steelmet provide third-party inspection and full traceability?

Answer: Yes. Steelmet Industries can provide full documentation and third-party inspection reports upon prior agreement.

Q4. Are EN36 bars supplied in annealed condition?

Answer: Yes. EN36 black bars can be supplied in either **rolled** or **annealed** condition based on customer need.
